## HARBOURFRONT AMPHITHEATRE

**LOCATION**

Kenora

**COMPLETED**

2011

**ARCHITECT**

hilderman Thomas Frank Cram

**AREA**

225 feet long by 130 feet wide  
and 55 feet high

**DESCRIPTION**

This frame-supported fabric amphitheatre constructed under the City of Kenora's waterfront development initiative provides a host of new programming opportunities for the town's harbourfront. Roughly as large as a football field, it can hold 2,000 people for concerts, trade shows and other commercial and community events. Blackwell performed re-engineering, fabric detailing (including selection of studs, shackles, fittings, etc.) and patterning, and produced the design drawings used in the project.
